"Cloning and sequence analysis of the cyclomaltodextrinase gene
Bacillus sphaericus and expression in Escherichia coli cells.";
Appl. Microbiol. Biotechnol. 39:197-203(1993).

-i- FUNCTION: HYDROLYZES CYCLODEXTRINS. CAN ALSO ACT ON INEAR
MALTODEXTRINS, MITH THE EXCEPTION OF MALTOSE. THE PH OPTIMUM
PH 8.0 AND THE OPTIMAL TEMPERATURE IS 45 DEGREES C.

-i- CATALYTIC ACTIVITY: CYCLOMALTODEXTRIN + H(2)0 - LINEAR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BACSH

SUBUNIT: MONOMER.
SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY. CDASE MOST CLOSELY RESEMBLES NEOPULLULANASE FROM B. STEAROTHERMOPHILUS AND ALPHA-AMYLASE-PULLULANASE FROM C.THERMOHYDROSULFURICUM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: HYDROLYZES CYCLODEXTRINS, CAN ALSO ACT ON LINEAR MALTODEXTRINS, WITH THE EXCEPTION OF MALTOSE.

CATALYTIC ACTIVITY: CYCLOMALTODEXTRIN + H(2)O - LINEAR
